

# *The estimation for types of high- $z$ quasars observed by Japanese VLBI Network*

Yosuke FURUYA (Yamaguchi univ.)

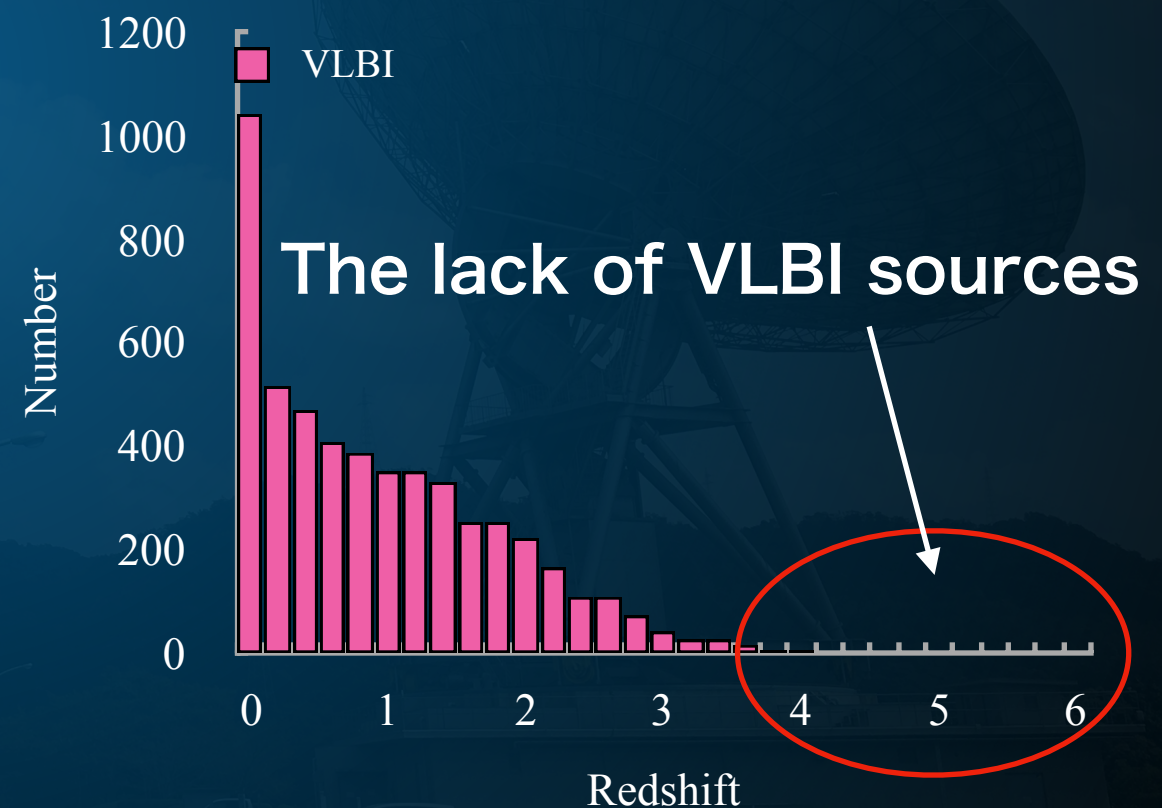

## **Do AGN jets evolve for cosmological timescale?**

- We observed nine sources to increase the number of sample at high- $z$ .

- Eight sources were detected and four sources were identified the types

**Please come to my poster and discuss with me!**

The number of detected sources by VLBI
