

P9: Radio Galaxies

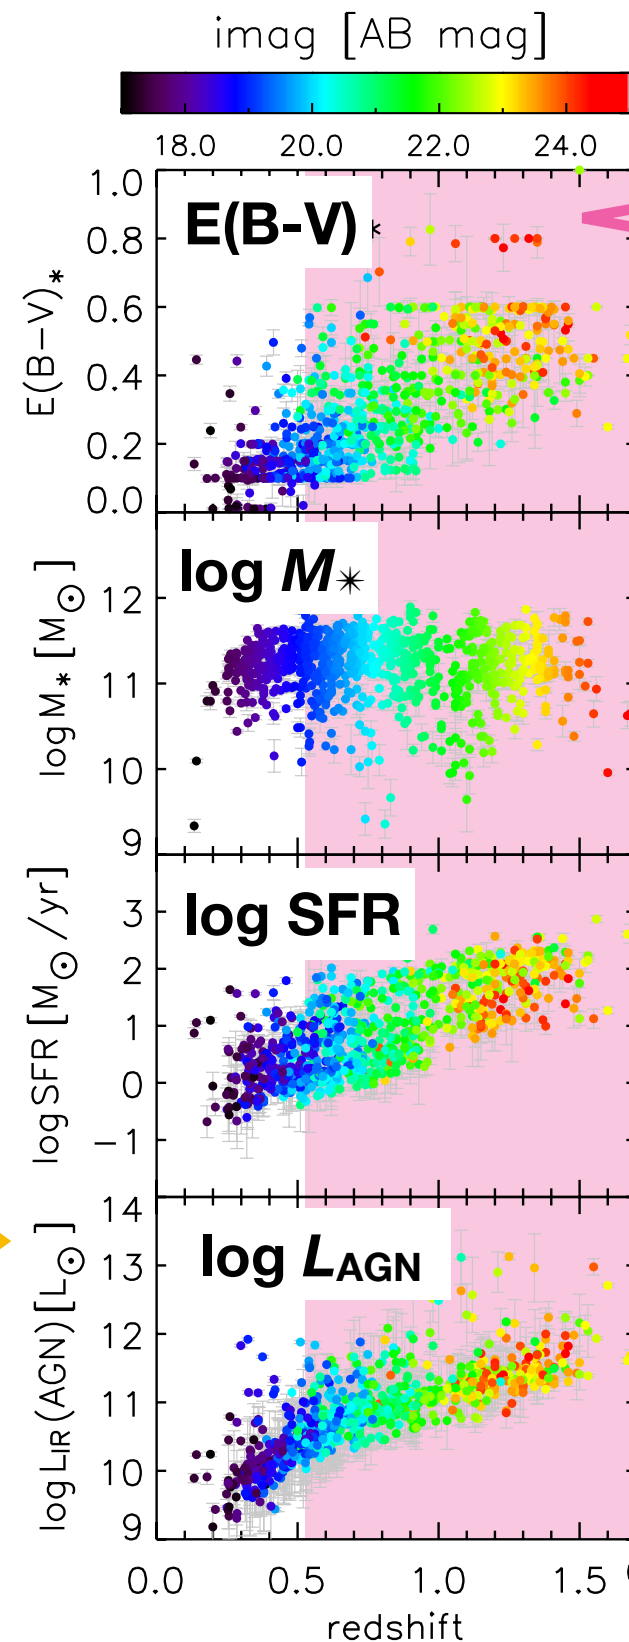

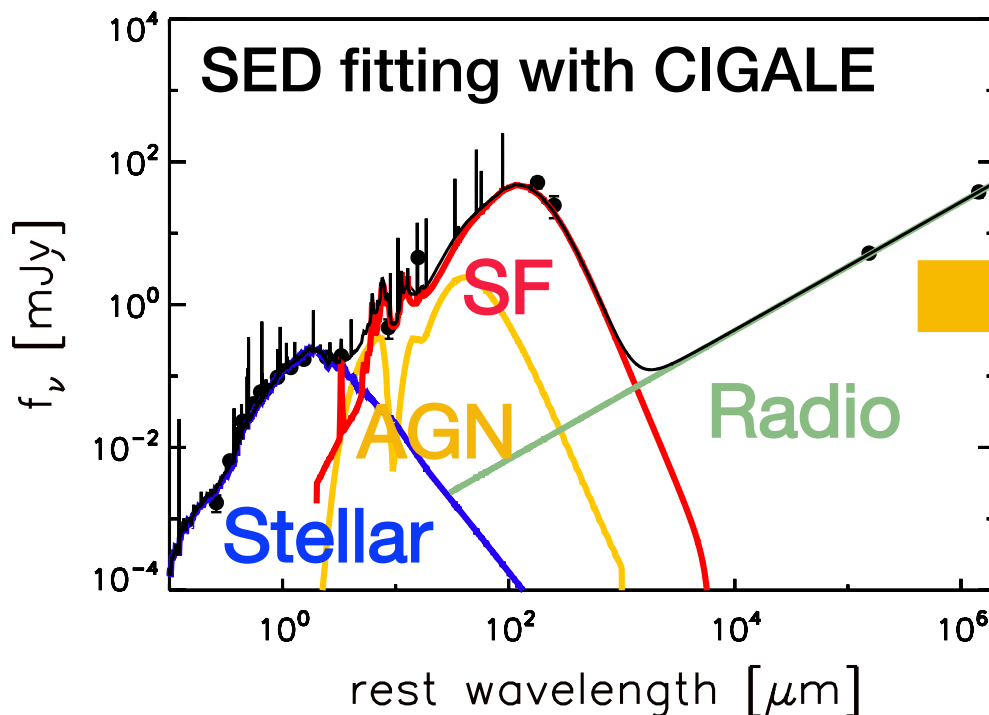

HSC-FIRST RG sample

1056 RGs

Compiling
multi-wavelength data
(optical-IR-radio)

Derive physical quantities
based on the SED fitting

We explore a new
parameter space
(luminous RGs at $z > 0.5$)

Key
results!

- ⚡ Dusty
- ⚡ Less massive
- ⚡ High SFR
- ⚡ High LAGN

Classical view of RGs

No dust
Massive host
Low SFR
