

# Fun with RG flows

Sergei Gukov

based on: arXiv:1503.01474

work in progress

Figure 3.12: Two possible phase flows for the rabbits *vs.* sheep model of eqs. 3.61. Left panel:  $k > r > k'^{-1}$ . Right panel:  $k < r < k'^{-1}$ .

$$\begin{aligned}\dot{x} &= x(r - x - ky) \\ \dot{y} &= y(1 - y - k'x)\end{aligned}$$

# Exact Five-Loop Renormalization Group Functions of $\phi^4$ -Theory with $O(N)$ -Symmetric and Cubic Interactions.

H. Kleinert and V. Schulte-Frohlinde

Figure 1: The Stability of the fixed points in the  $\phi^4$ -theory with  $O(N)$ -symmetric and cubic coupling for  $N < N_c$  and  $N > N_c$ . Our results are compatible with  $N_c = 3$ .

You can't connect the dots looking forward; you can only connect them looking backwards. So you have to trust that the dots will somehow connect in your future. You have to trust in something - your gut, destiny, life, karma, whatever.

*Steve Jobs*

There are those who look at things the way they are, and ask why ... I dream of things that never were, and ask why not?

*Robert Kennedy*

RG Flow = Dynamical System

- New techniques:

## Bifurcation Theory

- New predictions:

3d  $O(N)$  model

3d QED

4d QCD

- New techniques:

## Bifurcation Theory

- New predictions:

Conformal dimensions in 3d QED

$$\Delta_{4\text{-fermi}} - d \sim \sqrt{N_f - N_f^{\text{crit}}}$$

In fact, contrary to what some of the proposed scenarios might suggest!

$$\Delta_{4\text{-fermi}} - d \sim (N_f - N_f^{\text{crit}})$$

$$\mathcal{L} = -\frac{1}{4e^2} F_{\mu\nu} F^{\mu\nu} + \sum_{a=1}^{N_f} \bar{\Psi}_a (i\gamma^\mu D_\mu - m) \Psi_a$$

4-component Dirac spinors

spontaneous “chiral”  
symmetry breaking:

$$U(2N_f) \rightarrow U(N_f) \times U(N_f)$$

IR stable fixed point

# Condensed Matter Applications

- surface states in Topological Insulators

- unconventional quantum Hall effect in graphene

- underdoped and non-superconducting phase of high- $T_c$  cuprate compounds:
  - $N_f^{\text{crit}} < 2$  means the superconducting phase in these  $\text{CuO}_2$  layers is separated from the antiferromagnetic phase by an unconventional non-Fermi-liquid phase
  - $N_f^{\text{crit}} > 2$  means a direct zero-temperature phase transition from the d-wave superconducting phase to the antiferromagnetic phase

$N_f^{\text{crit}}$	Method	Year and Reference
$\leq \frac{3}{2}$	F-theorem	1999 [38, 61]
1.5	lattice simulations	2008 [62]
$\leq 2$	one-loop $\epsilon$ -expansion	2015 [63]
$\leq 2$	Hybrid Monte Carlo	2002 [55, 64, 65]
2.16	divergence of the chiral susceptibility	2002 [66]
2.89	$\epsilon$ -expansion	2016 [67]
$\frac{32}{\pi^2} \approx 3.24$	Schwinger-Dyson equations	1984-88 [37, 54]
$\leq 4$	F-theorem	2015 [68]
4	covariant solutions for propagators	2004 [69]
4.3	Schwinger-Dyson equations	1996-97 [70, 71]
6	perturbative RG in the large- $N_f$ limit	2004 [56]
5.1...6.6	comparison to the Thirring model	2007-12 [72, 73]
$4 \approx N_f^{\text{xSB}} \leq N_f^{\text{conf}} \leq 10$	functional RG	2014 [52]

Table 5: Search for the critical value of  $N_f$  in non-compact QED<sub>3</sub>.

- Large  $N_f$ :  $N_f^{\text{crit}} = 6$  [K.Kaveh, I.Herbut, 2004]

- One-loop 4- $\epsilon$  expansion:  $N_f^{\text{crit}} \leq 2$

$$d - \Delta_{4\text{-fermi}} = -\frac{1}{2N_f} \left( 4N_f + 1 \pm 2\sqrt{N_f^2 + N_f + 25} \right)$$

[L.Di Pietro, Z.Komargodski, I.Shamir, E.Stamou, 2015]

- Large  $N_f$ :

[K.Kaveh, I.Herbut, 2004]

- One-loop  $4-\varepsilon$  expansion:  $N_f^{\text{crit}} \leq 2$

$$d - \Delta_{4\text{-fermi}} \approx 0.54 (N_f^{\text{crit}} - N_f)$$

[L.Di Pietro, Z.Komargodski, I.Shamir, E.Stamou, 2015]

# Transcritical Bifurcation

$$\begin{cases} \dot{\lambda}_1 &= (N_f - N_f^{\text{crit}}) \lambda_1 - \lambda_1^2 \\ \dot{\lambda}_2 &= -\lambda_2 \end{cases}$$

# Transcritical Bifurcation

- Codimension-2
- Structurally unstable

$$\Delta - d \sim \sqrt{N_f - N_f^{\text{crit}}}$$

“resolution”

“deformation”

---

\* cf. “naturalness” a la K.G.Wilson, G. 't Hooft, N.Seiberg, ...

vs.

$$\Delta - d \sim (N_f - N_f^{\text{crit}})$$

$$\Delta - d \sim \sqrt{N_f - N_f^{\text{crit}}}$$
